
company profile

microsystems-partner

micro-part is the (micro)system-partner for small and medium companies. From the first idea to the series-product all parts of sensor-development is supported. The service span from the conception over the design to test and the delivery of integrated circuits and complete sensor-systems. Partner-companies take care of the production.

micro-part
microsystems-partner
circuits and sensors

Basics

- consulting for circuit and sensor solutions
- circuit and sensor development
- applications-array, integrated circuits
- production-service for circuits and sensors

Applications

- integrated circuits: ASSP, ASIC
- sensors: pressure, temperature, humidity, gas, proximity, distance, ultrasonics
- automation, building, medicine, automotive

micro-part-concept

Continuous improvements of the assembly permit modular microsensors. The combination of available sensor-cells with standardized electronic-modules reduce the development- and initialization costs. The consequences are shorter production-time and reduced development risk. Therefore microsensors for small quantities are also feasible.
